

The New Zealand Fodder beet company

Betimo Fodder Beet.

Description

Betimo fodder beet is a newly bred variety, recently released for the first time in New Zealand in 2016. Betimo is a medium dry matter content, mono-germ fodder beet with large red tankard shaped bulbs. It has improved disease tolerance giving more clean, green leaf. It has good bolting tolerance and can be grazed in-situ, or be lifted and fed whole or chopped.

Benefits of Betimo

- The very latest, improved genetics
- Very good disease resistance and bolting tolerance
- Strong foliar growth producing large tops makes Betimo suitable for grazing in-situ
- Suitable for sheep, cattle and deer
- Available in handy 50,000 seed boxes

Agronomic Traits

- Sowing season: Spring
- Suggested sowing rate: 80,000-100,000 seeds per ha
- Maturity: Days to grazing 200+
- Bulb: % above ground +/- 45%
- Dry matter: % 14 – 16%
- Bolting tolerance: Very good*
- Disease tolerance: Very good

*Subject to management and climatic conditions
