Devour

Tetraploid Annual Ryegrass

The dry matter heavy - weight

For more information on
this mix please go to
www.specseed.co.nz

- Devour is a Westerwolds type annual ryegrass that has extremely fast regrowth making it very suitable for quick winter feed.
- Devour is high performance ryegrass recommended to be sown in autumn that delivers increasing dry matter yields as the season goes on.
- Devour contains roughly twice the sugars, carbohydrates and water of a diploid ryegrass.
- Being easier to digest it therefore has a high voluntary intake by all stock types.
- Open erect growth makes Devour tetraploid annual ryegrass more clover friendly..
- Suitable for all stock types and boasts good disease resistance.
