

# Prophet Triticale - Info Sheet

## Background Information

**Prophet** is a triticale (wheat/ryecorn cross) providing a very flexible and valuable mid-late winter, single graze and/or lock up for green-chop or whole-crop silage option. Continual light grazings through the winter/spring rotation is also an option.

**Prophet** was bred for high tiller density, good disease tolerance and a larger seed head size, which are excellent properties for a whole crop cereal silage (WCCS) crop.

**Prophet** has improved winter hardiness and grazing tolerance which means that it can recover quickly from a winter graze and then has the potential to produce a large amount of high quality WCCS or green-chop silage.

**Prophet** has a higher WCCS quality and yield than other similar triticales due to its increased tiller number and larger seed heads.

## Characteristics

Seed Size	Grain Yield	Preferred Fertility Status	Disease Tolerance
Large	High	Medium to High	Very good

## Key Features

- Excellent WCCS yield and quality
- Increased tiller density
- Greater tolerance of winter grazing
- Excellent disease tolerance
- Very good carbohydrate and metabolisable energy values
