

## Fodder Beet *Grazing Type*

- Medium drymatter bulb (17%)
- Palatable with high utilisation
- Ideal for grazing
- High quality monogerm seed

## Ratings

### Yield

### Grazing Suitability

Troya is a modern fodder beet cultivar from the DLF breeding programme. It has been thoroughly tested in NZ over three years, and has leading performance for yield.

Troya has been very successful on many farms, and is used with many animal types and ages.

Troya is a hybrid cultivar with monogerm seed. This results in very even establishment of the desired plant population, maximising yield potential and enhancing weed control.

## Mean yield of the 10 cultivars sown in all 2015 trials

Cultivar	Yield	Sig. (0.05)
Kyros	24.9	a
Tintinel	24.5	ab
Bangor	23.9	abc
Troya	23.8	abc
Feldherr	23.3	abcd
